

Product Update

MRS-1000A Modular Rework System Transition to MRS-1100A

August 2011

OK International is pleased to announce several upgrades to its MRS-1000 Modular Rework System. The system has been enhanced by adding a free-standing board-holder, and a redesigned adjustable tool holder. The most noticeable difference is the addition of the BH-2000 free-standing board holder to replace the board holder rails that were part of the prior ATH-1000 system. This new board holder will provide more flexibility in board size and thickness, and a more stable working area.

Product Update

New MRS-1100A System includes:	
HCT-1000	Convection tool
PCT-1000	Pre-heater
ATH-1100A	Toolholder
BH-2000	Boardholder

Product Update

MRS-1000A Modular Rework System Transition to MRS-1100A August 2011

Product Update

A few other changes to note:

HCT-1000 has been reduced in price. We have removed the footswitch and nozzle carrier that were included in the system. They are still available, sold separately.

ATH-1000 has been reduced in price. The new design without the boardholder rails has allowed us to lower the cost of this component.

LM-1000 Light magnifier is no longer included with the system. It is still available and sold separately. We have a new part number for the light and base plate together, LM-1000A

Availability: These changes are effective immediately. We will no longer supply the MRS-1000A and MRS-1000B systems. The new MRS-1100A system is available to order now, however lead-times will stretch out initially to 6 weeks.
