Description

The Desco Europe ESD Survey Kit is used for measuring, verifying and qualifying products used in the ESD Protected Area. The kit includes the following instruments:

- **Digital Surface Resistance Meter** to measure resistance point-to-point (Rp-p) or surface to ground (Rg) in accordance with IEC 61340-2-3. Use for testing working surfaces, storage racks, trolleys, flooring, garments and seating.
- **Handheld Electrode** to measure Floor Materials and Footwear - Resistance Measurement in Combination with a Person (IEC 61340-4-5).
- **AC Outlet Analyser** to confirm that an electrical outlet's wiring is correct and the path-to-earth protective ground is intact.
- **Low Resistance Tester** to measure the resistance of grounding paths of banana jacks and other equipment.
- **Ionisation Test Kit** to measure static fields and to measure offset voltage (balance) and charge decay of ionisation equipment.
- **Training Paddle Set** to demonstrate the creation of static charges and the functionality of ESD control products.
- **Adjustable Metal Wrist Strap** to ground the operator.
- **Heel Grounders** to ground the operator via ESD flooring.

The ESD Survey Kit is available in two models:

Item	Region
222688	United Kingdom
222689	Europe

Per EN 61340-5-1 clause 5.2.4 Compliance verification plan: "A compliance verification plan shall be established to ensure the organization's fulfillment of the requirements of the plan. Process monitoring (measurements) shall be conducted in accordance with a compliance verification plan that identifies the technical requirements to be verified, the measurement limits and the frequency at which those verifications must occur. The compliance verification plan must document the test methods used for process monitoring and measurements. If the organization uses test methods that differ from the standards referenced in this standard, the organization must be able to show that the results achieved correlate with the referenced standards. Compliance verification records shall be established and maintained to provide evidence of conformity to the technical requirements. The test equipment selected shall be capable of making the measurements defined in the compliance verification plan."

This clearly states the necessity of having the means to perform regular self audits or compliance verification testing at your facility. The ESD Survey Kit will enable you to do this.

The ESD Standard EN 61340-5-1 can be purchased
